

6.2 Scenario 2 – Choose Flight

Scenario Description

This scenario evaluates the flight selection process after the search results are displayed.

Once the available flights are shown, the user selects a preferred flight and proceeds to the booking page.

This scenario measures the application's performance while processing flight selection requests.

Business Workflow

Home Page

Find Flights

Display Available Flights

Choose Flight

Navigate to Purchase Page

Test Steps

Step 1: Open Home Page

The user accesses the BlazeDemo application.

Step 2: Search Flights

The user selects departure and destination cities and searches for flights.

Step 3: View Available Flights

The application displays the list of available flights.

Step 4: Choose Flight

The user clicks the "Choose This Flight" button.

Step 5: Navigate to Booking Page

The application loads the purchase page containing flight information and booking fields.

Purpose of Testing

The objective of this scenario is to:

- Verify flight selection functionality.
 - Measure flight selection response time.
 - Validate navigation to the booking page.
 - Evaluate performance during flight selection transactions.
-

Expected Result

The selected flight should be reserved successfully, and the application should navigate to the purchase page without any errors.
