

9.2 Scenario 2 Execution Report – Choose Flight

Objective

The objective of this execution was to evaluate the performance of the flight selection functionality after displaying available flight options.

Workflow Executed

Home Page

↓

Find Flights

↓

Display Available Flights

↓

Choose Flight

↓

Navigate to Purchase Page

Execution Process

Users first searched for flights using the selected departure and destination cities.

After viewing available flights, users selected a flight using the "Choose This Flight" button.

The application processed the request and redirected users to the purchase page containing booking details.

Execution Configuration

Parameter	Value
Virtual Users	20
Ramp-Up Duration	30 Seconds
Requests Executed	Home Page + Find Flights + Choose Flight
Validation	HTTP Status 200

Execution Outcome

The scenario executed successfully with all transactions completed without failures.

The generated Gatling report indicated:

- 100% request success rate
- Successful flight selection
- Successful navigation to the booking page
- Stable application performance under load

The application handled concurrent flight selection requests efficiently and maintained acceptable response times throughout execution.
